Guide with optimal support.

An Accessory for Endovascular Procedures
The Lunderquist® Extra-Stiff Wire Guide is designed to provide maximum support for navigation of tortuous anatomy during endovascular procedures. With four highly flexible wire-guide tip configurations available, Lunderquist provides compatibility and unrivaled support.

Support
A PTFE-coated, stainless steel mandril is the key to Lunderquist providing maximum support and low surface friction during complex diagnostic and interventional procedures, including endovascular aortic repair.

Safety
The smooth transition from the stiff mandril to the flexible gold tip aids atraumatic vessel navigation. A radiopaque gold inner coil allows precise tip visibility and location during wire-guide manipulation.

Compatibility
Lunderquist is compatible with a wide variety of anatomies. Various lengths and four tip configurations are available, including double-curved and extended-curve tip designs that mimic the anatomy.
