Device Description
(includes Spiral-Z™ AAA Iliac Leg and Z-Trak® Introduction System)
Flex Design

Increased gap length between the z-stents on the proximal segment of the main body designed to provide greater conformance to angulated anatomy.

Zenith Flex® — Insist on precise placement and unrivaled migration resistance.
Unique Stent-Graft Design

**Graft flexibility**

- 5 mm gaps between the first and second stent and second and third stent on main body
  - Diameters 22-32 mm
- 6 mm gaps between the first and second stent and second and third stent on main body
  - Diameters 36 mm

- Secure graft-to-vessel apposition
- Dimensional stability

*Zenith Flex® — Insist on precise placement and unrivaled migration resistance.*
Unique Stent-Graft Design

- Independent z-stent configuration provides graft flexibility.
- Modular stent-graft construction allows unique adaptability to individual anatomy.
- Varied z-stent lengths and gage diameters promote secure graft-to-vessel apposition, columnar strength and graft flexibility.

Zenith Flex® — Insist on precise placement and unrivaled migration resistance.
Modular Design

Three-piece modular system allows the physician to customize a graft to the patient’s individual anatomy.

Zenith Flex® — Insist on precise placement and unrivaled migration resistance.
A Name with Built-In Meaning

- ARC Technology™ is the name for Zenith® AAA’s unrivaled systemic migration resistance:
  
  Active fixation,
  
  Radial force and
  
  Columnar strength...working in unison.

- Only Zenith AAA grafts have ARC Technology.

- Another example of Zenith AAA precision.

Zenith Flex® — Insist on precise placement and unrivaled migration resistance.
Zenith Flex® — Insist on precise placement and unrivaled migration resistance.
Active Fixation

Anchoring Barbs

The angle, staggered configuration and beveled tip of our barbs make them the industry standard for design and migration resistance.

Zenith Flex® — Insist on precise placement and unrivaled migration resistance.
Radial Force

Self-Expanding Internal Z-Stents

Provide continuous radial force, added stability and optimal graft-to-vessel apposition.

Zenith Flex® — Insist on precise placement and unrivaled migration resistance.
Columnar Strength

Long Main-Body Design

Mimics natural anatomy and features a time-tested balance of length, stability and flexibility.

Zenith Flex® — Insist on precise placement and unrivaled migration resistance.
Woven Polyester

- A lightweight, strong, shrink- and stretch-resistant synthetic polymer used in both plastics and fibers.

- This material is also used for open surgical AAA procedures.

Zenith Flex® — Insist on precise placement and unrivaled migration resistance.
Proximal Gold Radiopaque Markers

- Four gold markers (2 mm from the most proximal segment of the graft material) identify the most proximal segment of the graft material.

Zenith Flex® — Insist on precise placement and unrivaled migration resistance.
Contralateral Limb Gold Radiopaque Marker

- Gold check mark (✓) identifies proper contralateral limb orientation, simplifying contralateral limb wire-guide access.

Zenith Flex® — Insist on precise placement and unrivaled migration resistance.
Precise Placement

Highly Visible Z-Stents

Radiopaque Cannulas

Contralateral Limb Gold Marker

Contralateral limb "check mark"

4 Gold Proximal Markers 2 mm from most proximal segment of graft material

Zenith Flex® — Insist on precise placement and unrivaled migration resistance.
Low Iliac Attachment

- Extended main body with low iliac graft bifurcation provides longitudinal/columnar strength and simplifies cannulation of the contralateral limb.
Bifurcated Main Body Dimensions

- Graft Diameters: 22-36 mm
- Graft Lengths (Contralateral): 82-149 mm

Zenith Flex® — Insist on precise placement and unrivaled migration resistance.
Z-Trak® Introduction System with Flexor® Introducer Sheath

- Unique sheath construction provides optimal flexibility and maximum resistance to kinking and compression.
- Radiopaque band incorporated within sheath material identifies precise location of sheath’s distal tip for positioning accuracy.
- Hydrophilic coating allows precise delivery by dramatically reducing surface friction.
Captor® Hemostatic Valve

- The Captor Hemostatic Valve is incorporated into all main-body and iliac-leg introducer systems.
- Unique design inhibits blood reflux.

Zenith Flex® — Insist on precise placement and unrivaled migration resistance.
Trigger-Wire Release Mechanisms

- The top stent and ipsilateral limb release knobs are attached to their respective trigger wires and are used when the device is ready to be released from the delivery system. Sequential release knob positioning simplifies the deployment process.

Zenith Flex® — Insist on precise placement and unrivaled migration resistance.
Trigger Wires: The Secret to Precision Deployment

Zenith Flex® — Insist on precise placement and unrivaled migration resistance.
Dilator Tip

- Long, tapered tip minimizes vessel trauma and offers excellent trackability.

Zenith Flex® — Insist on precise placement and unrivaled migration resistance.
Gray Positioner

- The proximal tip of the gray positioner is tapered, which facilitates postdeployment retrieval of the top cap.

- The ipsilateral limb is attached to the proximal tip of the gray positioner and can only be released after it has been unsheathed and the distal trigger-wire release mechanism has been removed.

Zenith Flex® — Insist on precise placement and unrivaled migration resistance.
Inner Cannula

Inner cannula provides over-the-wire trackability.

Zenith Flex® — Insist on precise placement and unrivaled migration resistance.
Trigger-Wire Attachment

The proximal uncovered z-stent is housed within the top cap of the introduction system and secured with the trigger wire.

The trigger wire facilitates:

- Stabilization of the endovascular graft during deployment
- Controlled release of the graft from the delivery system
- Graft manipulation even when the graft is semi-deployed

Zenith Flex® — Insist on precise placement and unrivaled migration resistance.
Stent Lengths – Main Body 22-32 mm

*All other gaps are approximately 2-3 mm.

Zenith Flex® — Insist on precise placement and unrivaled migration resistance.
Stent Lengths — Main Body 36 mm

- Suprarenal Stent
- 6 mm Gaps*
- Distal Limb Stents
- Proximal Sealing Stent
- External Stents
- First Stent After Bifurcation

*All other gaps are approximately 2-3 mm.

Zenith Flex® — Insist on precise placement and unrivaled migration resistance.
Zenith Spiral-Z™ AAA Iliac Leg

- Increased leg flexibility and kink resistance*
- Enhanced delivery system
- Increased radial force at proximal sealing site*
- External stent made of a continuous nitinol wire

*Data on file

Zenith Flex® — Insist on precise placement and unrivaled migration resistance.
Spiral-Z AAA Iliac Leg Dimensions

- Leg Diameters: 9-24 mm
- Leg Lengths: 39-122 mm

Zenith Flex® — Insist on precise placement and unrivaled migration resistance.
Flexor Introducer Sheath

_Spiral-Z_

- The Flexor Introducer Sheath has a hydrophilic coating to enhance system trackability.

_Zenith Flex® — Insist on precise placement and unrivaled migration resistance._
Flexor Introducer Sheath

- Introducer sheath for iliac legs is 71 cm
- Introducer sheath plus valve length for iliac legs is 82 cm
- Iliac leg diameter 9-16 mm in 14 Fr sheath
- Iliac leg diameter 20-24 mm in 16 Fr sheath

Zenith Flex® — Insist on precise placement and unrivaled migration resistance.
Spiral-Z External Stent Lengths and Gaps

- The strut lengths in the external spiral stent vary from 7.5-9.5 mm
- Gapping can vary from 4-8 mm over the length of the leg graft
- Both internal sealing stents are made of stainless steel

Zenith Flex® — Insist on precise placement and unrivaled migration resistance.
Spiral-Z Stent Overlaps

Contralateral Iliac Leg (cl)
• Overlap into the *main body* should be a minimum of one stent and a maximum of 30 mm, designated by the gold radiopaque marker.

Ipsilateral Iliac Leg
• Overlap into the *main body* should be a minimum of one stent and a maximum of 55 mm.

Zenith Flex® — Insist on precise placement and unrivaled migration resistance.
Diameters 22-32 mm

Main Body
cl Length (mm)
82, 96, 111, 125, 140

18 Fr Z-Trak Introduction System
Diameter (mm)
22, 24, 26

20 Fr Z-Trak Introduction System
Diameter (mm)
28, 30, 32

5 lengths, 6 diameters, 30 sizes of main bodies

Zenith Flex® — Insist on precise placement and unrivaled migration resistance.
36 mm Device

Main Body
cl Length (mm)
95, 113, 131, 149

22 Fr Z-Trak Introduction System
Diameter (mm)
36

36 mm main body is available in 4 lengths.

Zenith Flex® — Insist on precise placement and unrivaled migration resistance.

Zenith Flex® — Insist on precise placement and unrivaled migration resistance.
Follow-up Imaging Guidelines

All patients should be advised that:

• Endovascular treatment requires lifelong, regular follow-up to assess performance.

• Adhering to the follow-up schedule is critical in ensuring the ongoing safety and effectiveness of endovascular treatment.

• Subsequent reinterventions including catheter-based and open surgical conversion are possible following endograft placement.
## Minimum Follow-up Imaging Requirements

<table>
<thead>
<tr>
<th></th>
<th>CT (Contrast and Noncontrast)</th>

<td>$X^{1,3}$</td>
<td>$X$</td>
</tr>
</tbody>
</table>

1. Duplex ultrasound and non-contrast CT may be used for patients who have renal failure or are otherwise unable to have contrast enhanced CT.
2. Either predischarge or 1 month CT recommended.
3. If type I or III endoleak, prompt intervention and additional postintervention followup recommended.
4. Recommended if endoleak reported at predischarge or 1 month.
