Use the Vascular Retrieval Forceps to grasp and retrieve foreign bodies with ease.

Reach foreign bodies with ease. The streamlined design with a straight spring-coiled 2 cm distal tip helps you to secure a firm grasp of the foreign body.

Operate simple gripping jaws. The easy-to-manipulate jaws lock onto the foreign body, allowing it to be removed from the vessel.

View easily under fluoroscopy. The braided shaft, jaws, and the distal spring-coil tip are visible under fluoroscopy.

VASCULAR RETRIEVAL FORCEPS

VASCULAR RETRIEVAL FORCEPS

- The low-profile device can be delivered through a catheter with an ID larger than .045 inches and inserted through a hemostasis valve.
- The device features a PTFE-sheathed, braided stainless steel shaft and strong gripping jaws.
- The distal spring-coil tip is designed to prevent you from inadvertently engaging the vascular wall during manipulations.
