Evolution® Colonic
CONTROLLED-RELEASE STENT - UNCOVERED

Step 1
Remove protective tubing from stent.

Step 2
Introduce delivery system in short increments over wire guide, into accessory channel, until it is endoscopically visualized exiting scope.

Note: Minimum accessory channel 3.7 mm

Step 3a
Fluoroscopically position radiopaque markers on inner catheter beyond extremities of stricture to be crossed.

Step 3b
Note: Yellow marker on the delivery system located at proximal end of stent can also serve as an endoscopic/fluoroscopic reference for positioning of the proximal (nearest user) end of the stent relative to the stricture.

**Step 4**

Confirm desired stent position fluoroscopically and deploy stent by removing red safety guard from handle. Continue deploying stent by squeezing trigger.

**Step 5a**

If repositioning is required during deployment, it is possible to recapture stent. **Note:** It is not possible to recapture stent after passing point-of-no-return, indicated when the stent deployment indicator on top of introducer has passed point-of-no-return indicator on handle. The stent can be captured a maximum of 5 times.

**Step 5b**

To recapture stent, push directional button on side of delivery system to opposite side. **Note:** Hold thumb on button when squeezing trigger for first time to recapture. Continue squeezing trigger as required to recapture stent by desired amount.

**Step 6**

To resume deployment, push directional button to opposite side again and hold button for first stroke while squeezing trigger.

**Step 7**

When stent point-of-no-return has been passed, pull safety wire out of delivery handle near wire guide port. Continue deploying stent by squeezing trigger.

**Step 8**

After deployment, fluoroscopically confirm stent expansion. Once expansion is confirmed, introduction system can be safely removed.

Refer to current instructions for detailed system use.
