Rely on Cook Medical’s diverse line of breast lesion localization devices to increase your procedural precision from the very start.
Used for preoperative marking of nonpalpable breast lesions.

- Bevel-cut needle tip guides the needle to the optimum position for placing the localization hook wire.
- Reference burnish mark, when visible just outside the needle hub on the spring-hook wire, provides visual assurance that the hook wire is within the needle tip during needle manipulation.
- Needle is marked in 1 cm increments for depth guidance during a procedure.
- The reinforced tip of the spring-hook wire serves as a visual and palpable landmark for the surgeon to gauge distance to the lesion during dissection and reduces the risk of severing the hook wire.

X-Reidy
BREAST LESION LOCALIZATION NEEDLE

Used for preoperative marking of nonpalpable breast lesions.

- X-shaped hook provides fixation and is intended to limit migration.
- 3 cm stiff portion of the shaft is easily palpated during surgery.
- Soft, flexible wire portion of the shaft is comfortable for the patient.
- Reinforced wire facilitates surgical procedure by aiding in locating the wire and is intended to reduce the possibility of accidentally cutting the wire.

Used for preoperative marking of nonpalpable breast lesions. Features the Müller-Schimpfle coil.

- EchoTip® needle ensures increased visibility during ultrasound.
- Coil acts as marker to indicate lesion location.
- MR conditional up to 3 T.

Work with precision and confidence.

Give your patients the assurance they deserve.
When your patients are counting on you for the best results possible, the tools you use can help deliver the outcome they need. Whether you’re fighting cancer or localizing a benign tumor, precision and accuracy are paramount. That’s why Cook Medical offers a variety of breast lesion localization needles to fit your procedural needs.

Look for the following symbols denoting specialized needle technologies:

**MReye® Needles**
For Magnetic Resonance Imaging

Cook’s interventional MReye needles are used for initial puncture and positioning control as well as for biopsies and other interventional procedures performed in combination with magnetic resonance imaging.

- MReye products are created from a non-ferromagnetic material that helps reduce artifacts by up to 1,900%.*
- MReye needles are recommended for use with MRI scanners not exceeding 3 T.

**EchoTip® Needles**
Improved Visibility for Ultrasound

- Hundreds of microscopic dimples on the needle surface ensure a strong echo reflection.
- Our process delivers brilliant, clearly visible images of the needle tip during scanning.
