Manage postpartum hemorrhage.

Bakri®
POSTPARTUM BALLOON WITH RAPID INSTILLATION COMPONENTS

COOK MEDICAL
A simple solution for postpartum hemorrhage

Sequential procedure considerations for conservative management of uterotonic-resistant PPH

Vaginal birth
1. Bimanual massage
2. Repair of any lacerations
3. Dilation and curettage to rule out retained placenta
4. Placement of intrauterine balloon
5. Selective embolization

Cesarean birth
1. Fundal massage
2. Inspection of the broad ligament and posterior uterus and inspection for the presence of retained placenta
3. B-Lynch suture
4. Placement of intrauterine balloon
5. Uterine artery ligation

Note: The above flowchart describes sequential treatment considerations for uterotonic-resistant PPH with blood loss under 1,500 mL, after evaluation for uterine inversion and amniotic fluid embolism.

References
The Bakri Postpartum Balloon with Rapid Instillation Components is used for temporary control or reduction of postpartum uterine bleeding when conservative management of uterine bleeding is warranted.

- Can be used following vaginal or cesarean delivery
- Includes rapid instillation components to facilitate inflation of the balloon
- May be used with B-Lynch compression sutures if clinically warranted
- Is constructed of latex-free silicone

When inflated with sterile liquid, the Bakri Postpartum Balloon with Rapid Instillation Components applies pressure to the uterine walls that may provide management of postpartum hemorrhage.
This device is intended to provide temporary control or reduction of postpartum uterine bleeding when conservative management is warranted. The set includes a 60 mL syringe, extension tubing with bag spike, and dual check valve. Please refer to the Instructions for Use for complete information on product usage, indications, and contraindications.
